

TriLattice AIOS™ PUBLIC ARCHITECTURAL LICENSE AGREEMENT

Tier 0 — COMMUNITY LICENSE (BGFD NON-DISCLOSURE & NO ACCESS TO ISOLATED BGFD SUB-SYSTEMS)

Permitted Use Under Informal Joint Partnership

Developers can build modules, write apps, create drivers, build creative runtimes and build AI integrations geared solely to the general public in joint-partnership with the creator/owner of the TriLattice AIOS.

Tier 0 allows developers to explore, study and develop TriLattice AIOS **public system architecture** (Modular microkernel philosophy, Graph-oriented data structures, AI-native workflow concepts, Runtime orchestration diagrams, Event-driven architecture, Memory hierarchy concepts, Offline AI workstation concepts and Unified media pipeline concepts), The **public security stack** (Sandboxing, Capability-based permissions, Zero-trust process model, Encrypted runtime partitions, AI workload isolation, Browser isolation containers and Secure memory zones), **conceptual graph memory architecture** (Knowledge graph interfaces, Semantic memory APIs, Vector indexing systems, AI context caching and Memory node schema), **public AI runtime infrastructure** (AI model orchestration, Local inference APIs, GPU scheduling, Multi-model pipelines, Agent runtime interfaces

and AI media generation support) **public browser security pipeline** (Sandboxed browser containers, Download isolation, Runtime scanning APIs, Secure upload/download relay and Encrypted rendering zones), **unified creative runtime (public)** (Media engine architecture, AI video pipeline support, GPU render APIs, Audio/visual runtime and Creative app framework), **Internal Runtime Buses (Public IPC)** (Message buses, Event routing, Runtime signaling, Shared memory interfaces and AI orchestration channels, and lastly **Public Hardware Integration** (GPU abstraction, NPU interfaces, Display stack, Peripheral APIs, Camera subsystem interfaces).

Strict Prohibitions

Developers cannot reproduce TriLattice coherence behavior, create recursive graph-state runtime, build a true BGFD kernel or reconstruct TriLattice cognition fabric.

Legal Characterization

Tier 0 materials are expressly classified as the “Architectural shell” and serve to expose TriLattice AIOS architecture, developer APIs, module contracts, runtime concepts, security model and hardware abstractions, But reveal **zero actual BGFD runtime logic**.

IP Ownership, Copyright and Trademark

Licensors retain 100% ownership of the TriLattice name, trademark and brand identity, as well as ownership of all copyrighted concepts, technical documentation and general documentation pertaining to the TriLattice Operating System.

Involuntarily Binding Agreement

By engaging with the creator of TriLattice OS, reading this agreement and/or establishing communication with the creator of TriLattice AIOS for the purpose of gaining access to TriLattice AIOS material, you are automatically and involuntarily bound to this Public Architectural License Agreement, and you are bound to the rules and terms defined herein, which serve to maintain TriLattice AIOS as the intellectual property of the Licensors, and preserve the Licensors’ proprietary architecture dealing with Braided Graph Field Dynamics (BGFD).
